 Post Surgery Pain

Ms. Wendy Norman:
"After a car accident, I had constant pain in my back for two years. I tried several different doctors, but nothing worked. Then I discovered Outcome Medical of Georgia at our company health fair, and now I am pain free."

Ms. Deanna Williams, Peachtree City: *"I spent three years in pain. I had back surgery, Chiropractic, Epidurals, Radio Frequency Ablation, Physical Therapy, and, of course, the medications for pain and the antidepressants. Then I read a news story in the local paper that talked about the Outcome Medical of Georgia clinic and how they treated chronic pain without using narcotic medications. Today, I am pain free! I sleep all night, and I no longer have to take any of the drugs."*

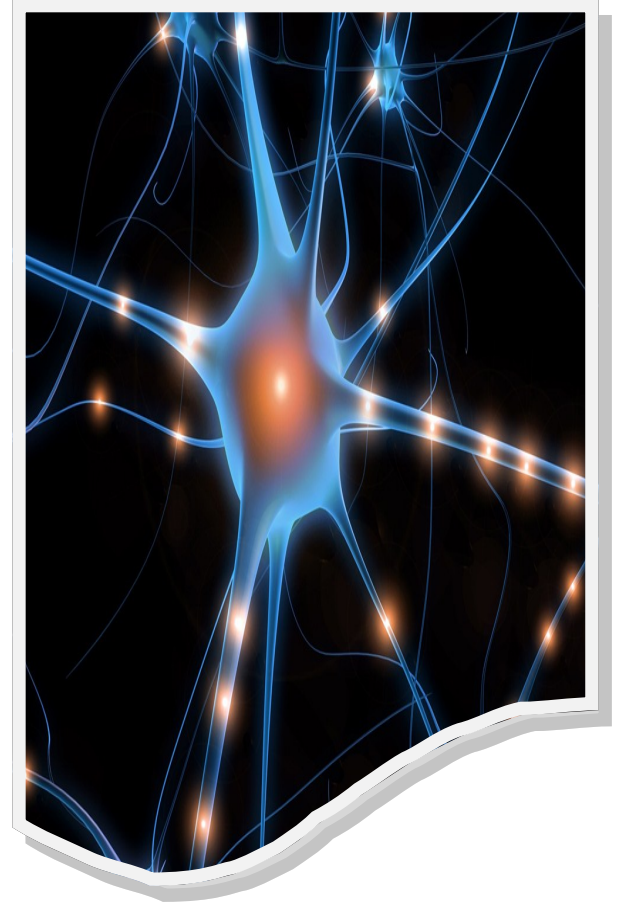

Gary Stodgill:
Peripheral Neuropathy.
"I traveled from Fort Worth, Texas and stayed in a hotel to be treated at the Outcome Medical of Georgia clinic. I had a cancerous tumor in my buttocks that was treated with radiation. The radiation damaged nerves in my legs resulting in incredible pain in my feet. Thanks to Dr. Snyder and an intensive treatment series with their unique protocol, I have had a dramatic reduction of my pain."

Treating Pain At
 The Cellular Level,
 Utilizing A Multiple
 Faceted Approach

Dear Referring Physicians:

At Outcome Medical of Georgia, we shy away from using the term "Pain Management" because of the perception or connotation of managing pain with narcotic medications. Our goal is to treat the patient's pain problem with a protocol that we believe addresses the root cause of the pain. I am pleased to say that a large percentage of our patients experience very positive outcomes without the need for narcotics. Often, our treatment protocol involves multiple visits which can include using one or more of the following; Epidurals, Peripheral Nerve Blocks, Selective Nerve Root Blocks, Intercostal Nerve Blocks, Sciatic Blocks and Trigger Point Injections. In addition to the nerve blocks, our protocol incorporates the use of electrical stimulation with a very advanced exogenous electrical technology utilizing frequency ranges from 1 to 20,000 Hz., giving it the capability of influencing cellular performance in the nerve as well as the muscle.

We incorporate computerized lumbar and/or cervical traction for those patients with upper cervical or low back problems. We are one of the few pain treatment centers in the area that utilizes Lumbar Passive Motion for back pain patients. The fact is, we are a pain treatment center

We look forward to partnering with our referring physicians and keeping them apprized of the patient's progress while under our care.

The Outcome Medical Integrated Nerve Block protocols are now used by many doctors throughout the United States who are experiencing a high level of successful patient outcomes. When you want more for your patients, we hope you will consider referring to Outcome Medical of Georgia. To learn more about our organization, visit our web site: www.outcomemedicalofga.com.

We Wish To Partner With Our Referring Physicians
