

Breaking the pain cycle is achieved, in part, with the non-steroid injections that are performed using ultrasound guidance for peripheral and spinal nerve blocks.

We treat with Breakthrough Cellular Depolarization Technology, a Protocol that...

*Repairs Cellular Damage,
Breaks the Pain Cycle,
Restores Metabolic Function,
Mitigates Inflammation,
Improves Circulation,
Restores Sleep Mediators, and
Greatly Reduces or Eliminates
the Need for Pain and
Antidepressant Medications*

INFLAMMATION AT THE
CELLULAR LEVEL
WITHOUT NARCOTICS**

GREAT PATIENT OUTCOMES

Ms. Wendy Norman

After a car accident, I had constant pain for two years. I tried several doctors, but nothing worked. Then I

discovered Outcome

Medical of Georgia at our company health fair, and now I am pain free.

Ms. Deanna Williams,

Peachtree City: I spent three years in pain. I had back surgery, I had Chiropractic, I had Epidurals, Radio Frequency Ablation,

Physical Therapy, and, of course, the medications for pain and the antidepressants. Then a news story in the local paper talked about this clinic and how they treated chronic pain by treating the cellular system. Today, I am pain free! I sleep all night, and I don't take any of the drugs.

Gary Stodgill; Peripheral

Neuropathy. I traveled from Fort Worth, Texas and stayed in a hotel to have the pain in my feet treated.

I had a cancer tumor in

my buttocks treated with radiation to get rid of the tumor. After the radiation, I developed incredible pain in my feet.

Thanks to Dr. Snyder and their unique protocol, I have had a tremendous reduction in my pain.

Earl J. Snyder, M.D.

Dear Chronic Pain Sufferer,

If you have chronic pain, then I know that your life has been severely altered, and you have made many changes in your life because the pain is long term. You have most likely, been to a number of doctors and tried a variety of treatments, yet your pain persists.

Treatment failure can be a result of the failure to effectively repair the injured cells and mitigate the inflammation. Sometimes, there are other issues that can be playing a role in chronic pain conditions which may be overlooked by other doctors, such as low testosterone. Research now confirms that this critical hormone can play an important role in people who suffer with chronic pain. We now test for this plus other hormones, nutrition, and minerals deficiencies that affect cellular function.

Our treatment technology makes it possible to influence repair of the assaulted cells and mitigation of the inflammation. Our organization has spent years refining the protocols that today is giving our patients a much improved quality of life.

We offer a free consultation, so if you wish to get more first hand information regarding our clinic, please call. Thank you

We specialize in putting smiles back on the faces of patients who suffer with Chronic or acute Pain.

Our Goal is... Resolution, Not Management
